ໂຈນໄ Texting friends in a *very* silly way >:3c

Hiiii, my name's Tuna and I like to do silly things! One thing I particularly to do is sending my friends in a very, *very* interesting way. They don't exactly like what I'm doing but I don't really care yk =w= AAANYWAYS, trying to write them myself has been VERRRRY tedious lately and I'm also VERRRRY lazy as well. So, I want you. Yes, YOU to help me write some code to automatically change what I want to say into a VERRY interesting set of words. And with that out of the way, I'll tell you how I make them silly!!!! X3

I REALLY **HATE!!!!** vowels, so I would remove all of them and replace them with "F" (in uppercase btw) because why not lol (ex CANNED -> CFNNFD). THEEEEN, I'll add in "w" (lower case) every three letters (ex XXXXXX -> XXXwXXX). After that, I like to switch things up a bit (quite literally xdd) by reversing the entire sentence and cutting the first and last characters out. Oh, I forgot something, you also have to remove all the spaces in the beginning too ^^". Lastly, you have, and I mean **HAVE** to add in ":3" at the ending (put a space before that too C:<).

OK!!!! Now that I've told you all this, you're gonna do this for me, riiight??? pleasssssse??? Whatever, I'ma FORCE you to do this anyways **AHAHAHAHAHAHA**

Input:

One line of sentence with length N. ($10 < N < 300$ or smth idk prob more)

Output:

One line of processed sentence (gibberish that ends with :3).

TESTCASE

input	output
Hello World	wlrFwWFlwLF :3
Tuna is so very awesome!!!	w!!FwmFswFwFwyrFwvFswsFFwnF :3
If this doesn't work then you might as well give up to be honest :p	:wtsFwnFhwFbFwtpFwFvFwglwFwswFthwgFmwFFywnFhwtkrwFwtw'nswFFdwsFhwtf :3
